

For Senior housing units we have a product designed to aid seniors in and out of the bathtub without much aid and with more ease. It helps reduce slip and fall accidents. The best part is that now you do not have to replace the tub and can have the existing tub modified in a one day process with no down time or inconvenience to you or your tenants.

A prefabricated walk in tub costs \$3000 and up with our system you can save 70% of this cost

#### Walk-in-tub conversion

The side of the bathtub is cut away (leaving enough of the tub wall to allow the water to drain and not run over the edge); the open area is then filled in and smoothed, to the original color of the bathtub, resulting appearance is difficult to discern from a factory finish!

*Customer satisfaction and quality of work is what we stand by. Rest assured that from start to finish we will go beyond expectations!*

High solids acrylic urethanes, particularly, possess many advantages over other coatings, which include but are not limited to the following:

**APPLICATION:** Due to excellent flow characteristics, high solid acrylics are easier to work with compared to epoxy or polyesters, particularly in the areas of runs and sags.  
**SETUP TIME:** High solid acrylic urethanes usually have a faster tack dry and a faster dry to handle time than epoxy.

**DURABILITY:** Accelerated weathering tests indicate a high solids acrylic urethane will surpass epoxy and polyesters in gloss retention and U.V. resistance (yellowing) against long term exposure.

**ABRASION RESISTANCE:** Failing sand tests indicate about a 10% higher rating of wear resistance of the resin layer compared to polyurethanes and polyesters.

**WATER RESISTANCE:** In a moisture laden environment acrylic urethanes survive for longer periods of time without failure when compared to polyesters.

**CHEMICAL AND STAIN RESISTANCE:** Acrylics show better overall stain resistance versus epoxy.

**Save 70% over replacement costs**

With a Stone-Flecks coating you can turn your Formica counter top into a stone like finish at a great saving to you as opposed to replacement, and maximize your rental units to create higher revenue!

- Eliminate repeated caulking associated with tub surrounds
- No more grouting
- No more mildew
- Low maintenance easy to clean surface
- Quickly change colors

Refinishing your bathtub and ceramic tile or fiberglass wall surround at the same time is the most economical method to quickly upgrade your bathrooms with minimal downtime & cost.

This process works by the compounds fusing and becoming part of the original finish.

This process ensures most protection against impacts, stains, and chemicals which means more years of reliable service.
